

MICHIGAN SUICIDE PREVENTION: FINDING & USING LOCAL DATA

Thomas Largo, MPH
Anita Ofori-Addo, MPH
Michigan Department of Community Health

April 12, 2011

INTRODUCTION

- Why look at data anyway?
- Experiences at local level =
- Overall message:
 - Many challenges, but ...
 - Do the best you can!

OVERVIEW

- Sources of data
 - Description
 - How to obtain
 - Limitations
- Importance of calculating rates
 - Where to find local area population statistics
- Effective ways to present data

SOURCES of STATEWIDE DATA

- Death Certificates
- Hospital Discharge Data
- Child Death Reviews
- Youth Risk Behavior Survey
- Poison Control Center

POTENTIAL DATA SOURCES

- Trauma Registry
- Pre-hospital Care (EMS) Reports
- Medical Examiner Records
- Emergency Department Records
- Michigan Violent Death Reporting System

DEATH CERTIFICATES

- All MI resident injury deaths
- Since 1999, coded per ICD10
- Captures 100%
- Cause of injury – very accurate & 100%
- Most recent year: 2009
 - Available 10-12 months after end of year
- Information at local level:
 - County & city/town of residence
 - County & city/town of occurrence

DEATH CERTIFICATES

- In 2009, 1164 MI resident suicides
- By county, # suicides ranged from:
 - 192 (Wayne) to 1 (6 counties)
 - 29 counties had 2 – 5 deaths
- So, limitation=small numbers; solution = combine years or combine counties

DEATH CERTIFICATES

- Data items available:
 - Age
 - Sex
 - Race
 - Hispanic ethnicity
 - Ancestry
 - Cause of injury
 - Injury at work
 - City/county of residence/occurrence
 - Date of death
 - Brief description of how injury occurred

DEATH CERTIFICATES

- Cause of injury – specifies suicide mechanism
 - Poisoning (type of substance also available)
 - Hanging
 - Drowning
 - Firearm
 - Smoke/Fire/Flames
 - Sharp object
 - Blunt object
 - Jumping from height
 - Lying in front of moving object
 - Crashing motor vehicle

DEATH CERTIFICATES

- How to obtain data:
 - MDCH website for existing tables
 - MI injury mortality reports
 - 1994-1998
 - 1999-2001
 - 2002-2006
 - CDC WONDER
 - User can create MI map by county
 - Make request to TL
 - LargoT@michigan.gov

DEATH CERTIFICATES

Relevant websites

Existing tables on MDCH website:

<http://www.mdch.state.mi.us/pha/osr/index.asp?id=29>

Injury mortality reports (MDCH Injury Prevention Section):

http://www.michigan.gov/mdch/0,1607,7-132-54783_54879---,00.html

CDC WONDER:

<http://wonder.cdc.gov/mortSQL.html>

HOSPITAL DISCHARGE DATA

- All MI residents (incl. out-of-state hospitals)
- Definition – hospital admission/discharge
- All hospitals participate (~130 acute in MI)
- Diagnoses coded via ICD-9-CM
- Most recent year: 2009
 - Available 16 months after end of year
- Cause of injury coding
 - likely less accurate than death certificates
 - 81% in 2009

HOSPITAL DISCHARGE DATA

- Information at local level:
 - County of residence
 - Zip code of residence
- Can be tricky to compare counties due to differences in cause of injury coding by county

HOSPITAL DISCHARGE DATA

- In 2009, 5323 MI resident non-fatal hospitalizations for intentional self-harm
- By county, # ranged from:
 - 957 (Wayne) to 0 (3 counties)
 - 7 counties had 1 - 5 hospitalizations
- Small numbers less of a problem than with dc's, but can still be problem in some areas

HOSPITAL DISCHARGE DATA

- Data items available:
 - Age
 - Sex
 - Race
 - Principal & secondary diagnoses
 - Cause of injury
 - County/zip code of residence
 - Date of admission/discharge
 - Payment source
 - Discharge disposition (e.g., died, to psych facility)

HOSPITAL DISCHARGE DATA

- How to obtain data:
 - MI injury hospitalization reports
 - 1999 (hardcopy)
 - 2001, 2002, 2007 (on website)
 - Limited to counties with 90%+ E-coding rates
 - Make request to Tom Largo

HOSPITAL DISCHARGE DATA

Relevant website:

Injury hospitalization reports (MDCH Injury Prevention Section):

http://www.michigan.gov/mdch/0,1607,7-132-54783_54879---.00.html

CHILD DEATH REVIEW

- Performed at county/multi-county level
- Occurrences within county/counties
- Injury deaths (some do natural also)
- Ages 0-18 (some up to age 21)
- Composition of Review Team:
 - ME, LEA, DHS, prosecuting attorney, MDCH or local PH

CHILD DEATH REVIEW

- How to obtain data:
 - <http://www.keepingkidsalive.org/>
 - Existing tables
 - Fill out data request form (available online)

YOUTH RISK BEHAVIOR SURVEY

- Survey conducted in a sample of high schools (n=43-50) every other year
- Data exist for '97, '99, '01, '03, '05, '07, '09
- Includes questions on depression & suicide
- Age/sex/race/grade level available
- NOTE: Data not available at county level

YOUTH RISK BEHAVIOR SURVEY

- Questions related to depression/suicide

In last 12 months, have you:

- Felt so sad/hopeless almost every day for 2 weeks that you stopped doing some usual activity?
- Seriously considered attempting suicide?
- Made a plan for attempting suicide?
- Actually attempted suicide?
- Attempted suicide and had injury/overdose that required medical treatment?

YOUTH RISK BEHAVIOR SURVEY

- How to obtain data:
 - Reports found at: www.michigan.gov/yrbs
 - Kim Kovalchick: kovalchickk@michigan.gov
- National reports (most recent, 2009)
 - <http://www.cdc.gov/HealthyYouth/yrbs/index.htm>

POISON CONTROL CENTER

- Children's Hospital of MI (in Detroit)
 - Consolidated with DeVos (GR) in 2009
- 2008 – MI: 84,361 human exposure calls
 - They also field calls on
 - Human non-exposures
 - Animal exposures & non-exposures
 - Information only
- Data collected includes: age, sex, county, clinical effects, intentionality, substance type

POISON CONTROL CENTER

- Exposures divided into:
 - Unintentional
 - Intentional
 - Misuse
 - Abuse
 - Suspected Suicidal
 - 7,593 cases in 2008

POISON CONTROL CENTER

- For annual state reports (2005-2008):

 - Scroll down & select “Statistics”

About Us **Child Health Advocacy** **Clinical Services** **Get Involved** **Health Care Professionals** **Resources**

Cancer care that's just for him.

Children's Hospital of Michigan **DMC**

Home » Child Health Advocacy » Poison Control Center

Poison Control Center

For immediate advice on possible poisoning, toxic substance or any other environmental hazard emergency, you can call us toll-free, 24 hours a day, seven days a week to talk to one of the nurses, pharmacists or doctors at the Children's Hospital Regional Poison Control Center at **1-800-222-1222**. For non-emergencies, send us an e-mail at dmcpsc@dmc.org. For poison prevention information view one of our five video shorts on [Household Hazardous Materials](#).

Poisoning and toxic substances sound frightening and remote, but are as close as our cleaning closets, garages and gardens. If you have curious little ones or pets, it's reassuring to know that a little planning can help make your environment safer for those you love.

Please take a look at the many practical resources here for parents, ranging from mercury poisoning from old mercury thermometers, what to do when a pet eats something poisonous, and how to prepare for the unthinkable - communications plans, supply kits, and other plans in the event of a strike against the United States. You can take comfort in knowing the thousands of professionals at the Detroit Medical Center are prepared to care for the citizens of Michigan during any regional or national disaster or emergency, including acts of terrorism.

Statistics

POISON Help
1-888-772-1772

POISON CONTROL CENTER

- For adhoc requests: Susan Smolinske
 - ssmolins@dmc.org

POTENTIAL SOURCES

- Trauma Registry
 - traumatic injuries (excludes poisonings)
 - hospitalized or died in ED
 - much more detail than hospital discharge data
 - current effort to develop statewide system
 - access to data – need to check with local hospital(s) to see if they maintain registry & could work w/you
- Pre-hospital Care (EMS) Reports
 - > 800 agencies & 1.5 million calls per year
 - current effort to develop statewide system
 - as of 12/10 about 70% of agencies submitting data

POTENTIAL SOURCES

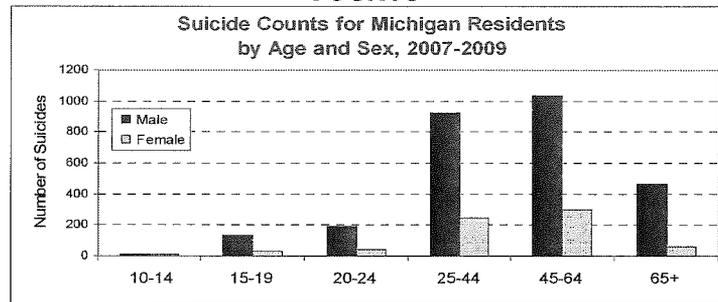

- Medical Examiner Records
 - Greater depth of info than death certificates
 - Availability of data – check with local ME

POTENTIAL SOURCES

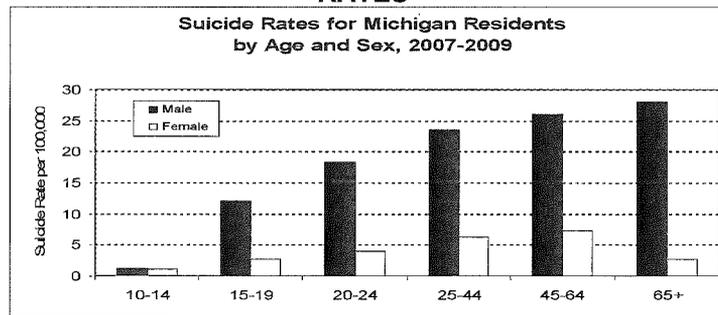

- Michigan Violent Death Reporting System
 - Designed to obtain detailed, high quality data
 - Suicide, homicide, unintentional firearm, undetermined intent, legal intervention, terrorism
 - Multiple data sources (*death certificate, law enforcement, medical examiner, child death review, supplementary homicide, crime lab*)
 - Resident and occurrent violent deaths

SO FAR, HAVE DISCUSSED
HOW TO ACCESS DATA ON
NUMBER OF CASES ONLY

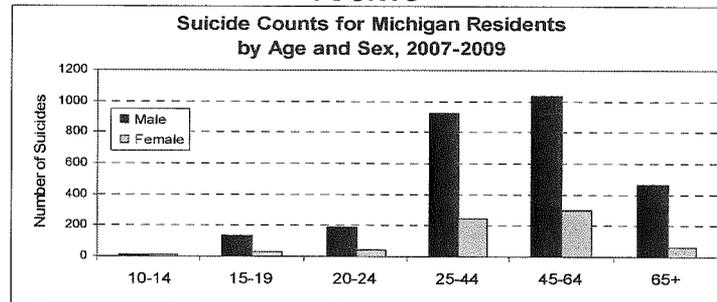

COUNTS

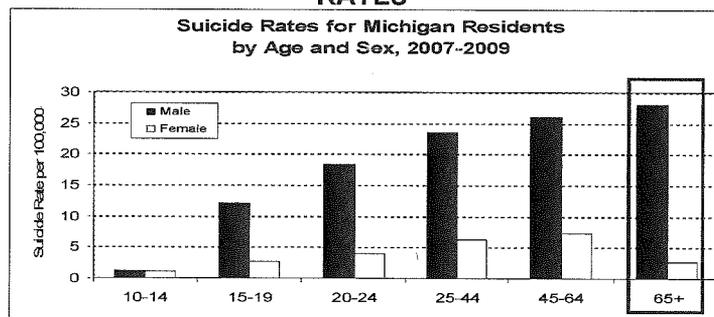

RATES

COUNTS

RATES

A RATE
IS
MUCH MORE USEFUL
THAN A
SIMPLE COUNT

A rate is essential to compare:

- different places
- different groups of people
- same group over time

CALCULATING RATES

- Need population data → Census
- To obtain on the web:

Health Statistics and Reports

The Department of Community Health is responsible for the collection of information on a range of health related issues. The information is collected to monitor the general health and well-being of Michigan's citizens. These data are useful for health program development, targeting and evaluation of program progress. The information is used to identify emerging health issues and trends and can be made available for epidemiological research. Statistics are developed from the data collected to provide basic information on these health events in Michigan. The data are provided at the state, county and community level. Listed below are the categories of available statistics.

Vital Statistics

1990-2009 Population Estimates

2000-2009 Population Estimates: The 2000-2009 population estimates by age, sex, race and Hispanic origin, the bridged, single-race estimates released by the National Center for Health Statistics (NCHS) in September 2009. Under a collaborative agreement with NCHS, the Census Bureau's National Health Interview Survey to the postcensal populations estimates from the Census Bureau's July 1 resident population.

Single-Race Estimates: Race information provided in the U.S. Census Bureau *Summary File 1* is collected differently than for the 1990 Census. That is, in the 2000 Census respondents could classify their race as one or more races. The National Center for Health Statistics (NCHS) and the Census Bureau have made an agreement with the Census Bureau to convert the Census Bureau's multiple-race resident population counts to single-race estimates. Information on the methodologies used to develop these estimates visit: <http://www.cdc.gov/nchs/nvrs>

1990-1999 Population Estimates: The 1990-1999 population estimates by age, sex, race and Hispanic origin, the bridged, single-race estimates released by the National Center for Health Statistics (NCHS) in July 2009. These revised intercensal estimates for NCHS by using the bridged single-race methodology described in the NCHS report. The 1990-1999 estimates produced for NCHS did not break the 15-19 age group into two common divisions available from a demographic source, the Division for Vital Records and Health Statistics Health have made interim estimates for these two age groups. Using estimates of the populations relative to the average proportions of 15 through 17 year olds and 18 through 19 year olds within each geographic area. These average proportions were applied to the 15 through 19 year old populations provided for the 1990-1999 age group and 18 through 19 year old populations for those years.

Hispanic or Latino: The U.S. Census Bureau defined Hispanic or Latino for both the 1990 and 2000 Census as one of the specific Hispanic or Latino categories listed on the questionnaire—"Mexican," "Puerto Rican," "Cuban," "other Spanish, Hispanic, or Latino." Origin can be viewed as the heritage, nationality group, ethnic group, or ancestry of a person or their parents or ancestors before their arrival in the United States. Persons who identify their origin as Hispanic or Latino are of Mexican, Puerto Rican, Cuban, Guatemalan, or Salvadoran descent.

Michigan Population Trends, 1990-2009
Michigan Total

Year	Total Population	Yearly Change	Population Ages 65 Years or Older	
			Number	Percent of Total Population
2009	9,969,727	-0.34%	1,339,772	13.44%
2008	10,063,422	-0.68%	1,304,322	13.04%
2007	10,071,822	-0.24%	1,280,162	12.71%
2006	10,095,643	-0.25%	1,260,864	12.49%
2005	10,120,860	0.08%	1,258,494	12.43%
2004	10,112,620	0.32%	1,246,595	12.33%
2003	10,079,985	0.29%	1,236,501	12.27%
2002	10,060,446	0.44%	1,231,920	12.26%
2001	10,006,266	0.50%	1,226,768	12.26%
2000	9,956,116	0.60%	1,221,363	12.27%
1999	9,897,116	0.50%	1,214,574	12.27%
1998	9,847,942	0.40%	1,212,433	12.31%
1997	9,809,051	0.52%	1,210,398	12.34%
1996	9,758,645	0.85%	1,206,417	12.36%
1995	9,676,211	0.82%	1,196,336	12.36%
1994	9,597,737	0.60%	1,182,078	12.32%
1993	9,540,114	0.64%	1,168,513	12.25%
1992	9,479,065	0.84%	1,150,787	12.14%
1991	9,400,446	0.96%	1,130,337	12.02%
1990	9,311,319	0.63%	1,109,408	11.91%

CALCULATING RATES

- Need population data → Census
- To obtain on the web:
 - go to <http://www.michigan.gov/mdch>
 - select Statistics & Reports in left column
 - select Population Trends in left column
 - scroll down and click on “Select Your Community for Population 1990-2009”
 - Select “Total Population in left column
 - choose from among Statewide Tables by County

CALCULATING RATES

Rate =

Number of cases occurring in a defined population in a given time period (numerator)

divided by

Average population of the defined population during the time period (denominator)

Another component = multiplier which converts to less awkward number

Calculation of a Rate

$$r = (c / p) \times 10^n$$

where:

r = rate (e.g. cases per 100,000 population)

c = number of cases occurring in a specified time period

p = number of people at risk of being a case during the time period

n = usually between 4 and 6 – your choice!

Rate Calculation Example 1

1. Number of Wayne County resident suicides in 2009: 192

Population of Wayne County residents in 2009: 1,925,848

$$\begin{aligned}\text{rate} &= (192 / 1,925,848) \times 100,000 \\ &= 10 \text{ per } 100,000\end{aligned}$$

Rate Calculation Example 2

2. Number of Wayne County resident suicides in 2007-2009: 568

Population of Wayne County residents in 2007,2008,2009 combined: 5,860,878

$$\begin{aligned}\text{rate} &= (568 / 5,860,878) \times 100,000 \\ &= 9.7 \text{ per } 100,000\end{aligned}$$

Caution

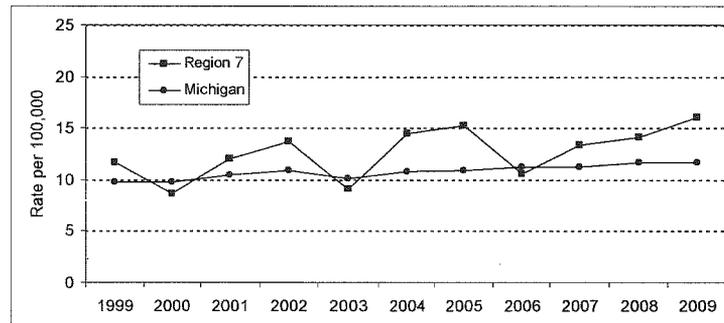

- Recommended that rates not be calculated if number of cases is “small.” For example, less than 6 cases.
- Solutions:
 - Combine multiple years
 - Combine counties

Effective Ways to Present Data

- By itself, a single rate is fairly meaningless
 - For overall local rate:
 - Develop trend data (at least 5 years)
 - Make comparisons (e.g., MI, other similar localities)
 - If numbers large enough, delve into local rate:
 - Male v. Female
 - Broad age groups
 - Mechanisms (e.g., firearm, hanging, poisoning)

Effective Ways to Present Data

Long-term trends in suicide rates,
Region 7* vs. Michigan

*Emergency Preparedness Region 7. Counties in this region include Roscommon, Crawford, Missaukee, Wexford, Manistee, Benzie Grand Traverse, Kalkaska, Otsego, Antrim, Leelanau, Charlevoix, Emmet, Cheboygan, Presque Isle, Montmorency, and Alpena

ADVANCED CONCEPTS

- Calculating/illustrating confidence intervals
- Comparing rates for statistical significance
- Age adjustment
